

Welcome to OpAmp Information Management LLC (OpAmp)

OpAmp is “second to none” in Information Management (IM) and system implementation services. With our business and technologies background we bring an engineering approach to information management.

Today, organizations face increasing challenges from

- Business Acquisitions and a constant need for business to “reinvent itself”, which drives a need for improvement and internal changes
- Increased customer and regulatory requirements along with complex commercial agreements that create greater information volumes
- Organizations are ‘siloes’, strictly focused on “their own work”, resulting in fragmentation of both procedures and priorities
- Technology challenges from outdated systems to modern systems resulting in a break down on all fronts

Continuing to do things “as they’ve always been done” would make it impossible to achieve an organizations goals, or to address today’s challenges. Also having the best application on the market does not equate to having a complete information management solution. Having the right people ensures success.

You need people who understand. OpAmp provides proven processes, deep understanding of business needs, including today’s standards and knowledge of current systems along with the insight of future trends.

Don’t go it alone, use OpAmp to bring value, whether it is a sanity check for your current strategies and plans, or whether you need the horsepower to move forward. OpAmp provides expertise in your business with effective processes and technology to ensure the accuracy, completeness and timeliness of information. The following are some examples of OpAmp services:

Capital Projects

For projects where we can influence the Information Management (IM) contractual requirements, our track record for improving the state of information is next to none, enabling projects to meet schedule milestones. OpAmp also has an impressive track record for rescuing projects in execution that are already experiencing gaps and issues with their information set. Examples of some of our IM services include: ★Defining IM strategies, plans and procedures ★Assessing, measuring completeness and resolving issues related to Contractor and Vendor Documents, Equipment Data and tagging challenges ★Proactively assuring the design ★Ensuring compliance ★Acquiring, verifying and providing information to commissioning ★Handover management and loading Operational systems and signoff to Operations and Business Entities.

Enterprise, Operations, Facility, Plant (Greenfield and Brownfield)

Having the right system does not equate to having a complete information management solution. OpAmp’s execution experience and knowledge of plant lifecycle enables successful system selection and implementation for Engineering and Operational toolsets. To enable an organization to take advantage of current technologies and to support the full use of their software choices, OpAmp can help organizations with ★ authoring IM strategies, plans and procedures ★Assessment of existing systems and needs, ★System recommendation, ★System implementation, ★System integration, ★Information cleansing and migration into new systems ★User training.

Manufacturers/Suppliers

525 N. Sam Houston Pkwy E. Suite 408
Houston, TX, 77060

Office: 281-305-4081

OpAmp can assist either the owner-operator or the manufacturer to complete information deliverables that were at risk of delaying FAT or customer's schedule. We streamline the process of obtaining, cleaning, and assembling manufacturing records while applying our deep understanding of the owner-operator and third-party requirements. We clear backlogs and assist in a variety of information related areas such as

- ★ Repairing the overall flow of the information
- ★ Establishing tracking tools for measuring progress of manufacturing record books throughout fabrication
- ★ Functioning as liaison between manufacturer, owner, and third party
- ★ transitioning to a completely digital environment.

Software Companies

OpAmp is often tasked with assisting clients in making operational and engineering toolset decisions. To support our clients with successful deployment, we have partnered with leading software companies. We do stress that our company is software neutral and we do not profit from any sales related to software sold. Our strategy in this portion of our business is to have a full understanding of competing systems normally seen in execution, construction, and operations.

OpAmp provides a variety of information-related professional services such as

- ★ Software deployment
- ★ Software configuration
- ★ Integration of systems
- ★ Testing
- ★ User training
- ★ Rescue efforts when the deployed product is not achieving the customer's expectations
- ★ Testing of new features and upgrades
- ★ Feedback to developers on issues and improvements.
